

How do NBA All-Star Players Shine?

Predicting All-Star Players

Med C. Billian

Goals of this Project:

- Which data features are the best to classify NBA All-Star players?
- Model - predict whether an NBA player should be part of the All-Star roster using data statistics.

Impacts:

- Help players understand how to be in the All-Star roster.
- Help determine if a player is an All-Star “mistake” or an All-Star “snub”?

Methodology:

- BeautifulSoup to scrape data from:
 - <https://www.basketball-reference.com>
- Join (Google Sheets) and Clean Data
 - Player Statistics
 - Team Statistics
- EDA Using Tableau - Remove Outliers
- Features Selection using Logit and VIF

Methodology (Data Set):

I combined the Players Statistics data, Team Ranking data, and All-Star Games Data. I matched the player, the team ranking and the All-Star data within the same season.

1. Training Data

- Data from 2000- 2019
- 9,283 rows

2. Validation Data

- Data from 2020
- 528 row

3. Test Data

- Data from 2021 (early this year)
- 539 rows

Methodology:

- 4 models using Training Data:
 - Logistic Regression with Scaled Data (Baseline)
 - Random Forest
 - GBM
 - XGB
- Evaluate 4 models using Validation Data.
 - Random Forest Final Model
- Fine Tune Final Model.
- Test final model.

Model Evaluation

Confusion Matrix and F1 Score:

- Random Forest model displayed the highest F1 using the validation data. **F1=0.698**
- Random Forest Model fitted with Training and Validation data scored better using Test Data **F1=0.818**

Model Evaluation

ROC Curve

- Random Forest Model using Test Data

AUC Score=0.989

Model Interpretation

- Using features_importances property - features with best predictive power:
 - Total Points per Game
 - Games Started
 - Assists per Game
 - Team Standing

Variable	Importance
pts_per_g	0.421812
gs	0.147859
ast_per_g	0.141913
tm_srs	0.132245
blk_per_g	0.093305
age	0.062866

Points Per Game VS Games Started

NBA All-Stars Classification

All-Star Position

- none
- Reserves
- Starters

Points Per Game VS Assists Per Game

NBA All-Stars Classification

Points Per Game VS Team Standing

NBA All-Stars Classification

Sample Use of Classification Model

- In 2007, Shaquille O'Neal was the starting center of the Eastern All-Star team
- Based on Shaquille O'Neal's 2007 statistics, he shouldn't be part of the All-Star team
- It was controversial that Shaquille O'Neal was voted over young star Dwight Howard.

MORE QUESTIONS

- How can I measure player's popularity?
- Should I use social media data?
How?
